

Easy to see when replacement is needed.

Wiper blades not only suffer wear and tear during operation, but also as a result of external weather conditions when resting on the windscreen. The new, innovative maintenance indicator helps you to see at a glance when blade replacement is necessary, namely when the indicator changes from black to yellow.

How the maintenance indicator works:

Maintenance indicator after purchase and fitting

The maintenance indicator consists of a spot bonded to the wiper blade end cap and covered by protective foil. **Remove the protective foil after fitting the blades!** Only then is the maintenance indicator activated!

Maintenance indicator in operation

The maintenance indicator is still black when the blade has been fitted, but it is subject to the same external weather influences as the wiper rubber, which becomes increasingly brittle over time. The maintenance indicator responds by gradually changing colour from black to yellow.

Maintenance indicator after 12 – 15 months

The maintenance indicator turns yellow sooner or later, depending on external influences: **when it has turned yellow the wiper blades should be replaced!**

After fitting the blade, remove the protective foil to activate the maintenance indicator!

At a glance.

Mercedes-Benz genuine wiper blades are the safe bet thanks to:

- Optimal wiping results in any weather and at any speed
- A new, innovative maintenance indicator
- Minimal wiping and wind noise
- Perfect fit and material properties
- Highest quality and production standards
- The latest technology
- Long operating life
- Excellent economy
- Lasting visibility and safety
- Reliable and convenient fitting with no tools required

Clear view for a clear road ahead.

Mercedes-Benz
The best or nothing.

For safe and unobscured driving pleasure.

Most of the Mercedes-Benz models come with aerowipers as factory standard. These wipers are designed to allow for maximum wiping pressure on the windshield. Utilizing aerodynamics, these are designed like a spoiler; the higher the driving speed, the greater the down force of the wipers on the windshield. This allows for optimal wiping effect even at high speed and heavy downpours (enhances visibility; better driving safety).

However, windshield wipers are very sensitive to environmental contaminants and grime settling onto the windshield.

To counter the effect of dirt and grime on wiper performance, it is recommended you follow a 2-step window cleaning process. For the best windshield cleansing effect, use the Mercedes-Benz Interior Glass Cleaner first prior to the application of the Window Cleaner, Intensive. An outstanding glass cleaner with anti-misting properties, the Interior Glass Cleaner removes dirt and grease in a single application.

While the Window Cleaner, Intensive removes deeply ingrained grime and detergents that normal soap powders may not be able to handle, while adding a thin layer of protection to your windshield.

The Mercedes-Benz Window Cleaner, Intensive and Interior Glass Cleaner are sold as a bundle for \$56 at the Mercedes*Boutique* located at Mercedes-Benz Center, Pandan Loop and Eunost Service Centers.

Wiper blades are wear and tear parts which when “not-in-use” over a long period of time, such as storage in park position or under the hot sun, may become permanently deformed and damaged. Further stress is also placed on the rubber wiper blades by different environmental influences. These progressively change the wiping effect of the rubber wiper blades and accelerate the aging process.

Mercedes-Benz Interior Glass Cleaner and Window Cleaner, Intensive Bundle Pack, \$56

This is why we at Mercedes-Benz place great emphasis on the quality of our windshield wipers. They are sure to give you the best possible visibility at any time of the year, and in any weather conditions. What is more, Mercedes-Benz genuine wiper blades help you to keep things that way: the new, innovative maintenance indicator shows you at a glance whether replacement is necessary.

All prices shown are inclusive of 7% GST and are subjected to change without prior notice. Terms and conditions apply.

Questions and answers about Mercedes-Benz genuine wiper blades.

Wiper blades begin to judder after a certain time. Do Mercedes-Benz blades do this too?

The **curvature of the spring rail** in Mercedes-Benz genuine wipers is individually configured for the curvature and size of the windshield in your Mercedes-Benz. This guarantees wiping without skipped areas and without intrusive noises.

Which blade must be fitted where?

The **guiding keys** on both blades prevent the blade for the driver's side from being confused with that for the passenger's side. Correct fitting is therefore assured.

How do I recognise the special quality of Mercedes-Benz genuine wiper blades?

As visible proof of our high quality, we are now marking all our genuine wiper blades with the **Mercedes-Benz star**. When you see the star, you can rely on it!

What happens to my windshield wipers in extremely hot or cold conditions?

Thanks to their **special rubber formulation**, Mercedes-Benz genuine wiper blades are very quiet even under extreme conditions, and offer the best possible wiping quality.
